The legend tells of a sacred location where pearls fall from the sky. Here you may find both immense wealth and divine knowledge, but you must follow the simple rules set by the higher being who must not be named...

Move a pearl so that you form a vertical or horizontal line of three or more pearls to collect them. By completing all objectives in the temple you will reach the next level. You must do this before you run out of moves. If you run out of moves you have to leave the game.

You can only move a pearl if a line of three or more is formed. If you don't find any possible moves wait a few seconds without moving the cursor to get a hint, you can also press the M key or secondary fire on the joystick. If no possible moves are found the game will be randomized with new pearls.

A brick wall may be moved by replacing it with a pearl. It can only be destroyed by a bomb or a disco ball. Some levels have objectives to destroy brick walls.

Collect a line of four pearls to get a bomb. A bomb will collect one pearl above, one under, one to the right and one to the left at the position it is moved to. Match five pearls in a line to get the disco ball. It will collect all visible pearls with the same color as it is moved to. By placing the bomb and disco ball on each other you will collect one entire column and one entire row of pearls from their position.
